

# IBM Lotus Domino Document Manager Connector for eCopy™ ShareScan OP®

*Hadleigh Marshall International Limited announces the availability of the IBM Lotus Domino Document Manager Connector for eCopy which enables users to scan paper documents directly to any available location within a Domino Document Manager Library*

IBM Lotus Domino Document Manager users can send paper documents to their chosen destination binders directly from the scanning device interface.

The IBM Lotus Domino Document Manager Connector for eCopy ShareScan OP is tightly integrated with the Domino Document Manager server ensuring that users can quickly and easily include paper documents into their existing Document Manager control procedures and workflows.

Easily configured using the eCopy standards for connector configuration, the connector supports routes to multiple Domino Document Manager libraries, including multiple servers

## Benefits

- Leverage existing document management systems
- Leverage existing MFP and scanner devices for distributed document capture
- Ensure that the document has been properly scanned using the Preview facility
- User authentication at the scanner ensures end to end process traceability
- Type ahead search for user authentication against any appropriate LDAP compliant directory
- Realtime integration with Document Manager server reduces administration time
- User authentication reflects unique user permissions
- Simple step by step process reduces training time
- Option to show required only profile fields reduces transaction time
- Profile field validation reduces error exceptions
- Shortcuts feature provides fast scanning to frequently used destinations

# IBM Lotus Domino Document Manager Connector for eCopy™ ShareScan OP®

## Connector Features

- Supports the IBM Lotus Domino Document Manager structural and data model
- Type ahead search enabled for user login
- Username lookup against any LDAP compliant directory
- Configurable Required / Optional profile field display
- Configurable Computed / Editable profile field display
- Validation for numeric and date profile fields
- Configurable shortcuts available per connector profile

Installation takes only a few minutes. The connector requires just the URL of the selected Domino Document Manager library to establish communication

## Specifications and Prerequisites

IBM Lotus Domino Document Manager Connector for eCopy ShareScan OP

The connector is supplied as a single installation executable.

Two Microsoft Windows compatible dynamic link libraries (DLLs) are installed, along with several support files. The installation routine ensures correct placement and registration, and also provides for updating and de-installation if required.

## Requirements

- eCopy ShareScan OP version 4.0 or higher
- LDDM server version 6.5.1 or higher
- LDDM Client installed on same machine as ShareScan OP Manager
